

EMAIL CONTINUITY SERVICE

Version: 2.2

SECURE YOUR E-MAIL COMMUNICATION: EMAIL CONTINUITY SERVICE EFFECTIVELY PROTECTS YOUR EMAIL SYSTEM FROM DISRUPTIONS.

The breakdown of email systems can have adverse consequences: the loss of important messages, loss in productivity or, in the worst case, even bringing entire departments to a standstill. Attacks, viruses and technical problems can incapacitate your e-mail communication at any time. In such emergencies, Email Continuity Service can be activated within a matter of seconds and can take over all of your e-mail correspondence, allowing you to fully concentrate on restoring your email infrastructure.

A disruption in an email system, preventing the sending and receiving of messages, is an IT administrator's worst nightmare. A system crash creates a risky situation for any company -- both the expense and the stress increase from one moment to the next.

Free yourself from this burden with antispameurope: This Email Continuity Service provides a second level of security for your e-mail infrastructure. Our data processing centers are a reliable stand-by system, always ready to take over your e-mail communication in the event of an emergency. If your own e-mail system breaks down or becomes overloaded, our service can be started within seconds. This instant activation is fast and can be launched either by Internet, by phone, or even automatically - without any unnecessary delay.

All incoming and outgoing messages will immediately be received and sent out by antispameurope's data processing centers, equipped with multiple levels of security. You can send and receive email messages, even outside your location or while mobile. Employees, partners, and customers can communicate without any interruption and won't even notice the switch.

Email administrators can completely focus on their own e-mail system and resolve the problem without unnecessary time pressure. Once your own system is running steadily again, it can resume handling the email communication.

Seamless access to all e-mails for a period of at least three months bridges the gap from the time of the last backup. The antispameurope Email Continuity Service offers complete data security around the clock - even in the case of a complete loss of the company's IT system, such as due to fire or water damage. Since no additional hardware or software has to be installed, you can use Email Continuity Service without extra expenses.

CHARACTERISTICS AT A GLANCE

- ▶ Seamless access to all sent and received e-mails over a period ranging from three months to ten years (with Managed E-mail Archive Service)
- ▶ Data protection, even in the case of complete loss of the company's IT system, e.g. due to fire
- ▶ No additional expenses for hardware, software or maintenance
- ▶ Immediate activation - either automatically, by Internet or by phone
- ▶ Bridging the gap since the last backup (backup window)
- ▶ Complete restoration of all emails that were sent or received during the breakdown
- ▶ Guaranteed email continuity around the clock - 24/7/365
